

Bus Station

Thanks for purchasing one of my kits,
This kit just requires glue and scissors to
cut the windows out.

Firstly, Carefully fold the main structure on the crease lines and glue together using the small tabs, try and get the corners nice and flush.

When dry glue to the base, It only fit's one way so can't go wrong.

Now glue the blue window and door frame on the inside then the window it's the shorter of the two. then the door, It's the larger of the two.

Then decide which order you want the main doors, You have the choice of two open one fully closed and one partly open, Then glue in place, Try and use little glue.

Next the roof sections, Once the cardboard frames are glued to the underside of the roof panels glue the windows in place tThe cardboard frames act as a guide so when you place the roof on the building they slot inside the walls which gives you something to glue to. Okay should be looking good, Now on to the small office.

Wrap the office walls around the cardboard base and glue, The small piece of card you have left you can use to glue inside to help the glue take. Then glue the blue window and door frame in and then the window and door.

Then glue the office roof on then glue to the main building.

Finally just the two signs left, Just cut out and fix where you think they will look best.
